2 Basic Operation

Key Names

Key Operation

The fishfinder is operated through menus.

To select a menu item:

1. Press **DISP** or **MENU**
2. Press **^** or **v** to move the highlight to the item.
3. Press **ENT** to select the item.

To change a number, word or setting:

1. Use the cursor keys, **<**, **^**, **v**, **>** to highlight the number, word or setting and to make the change(s).
2. Press **ENT** to confirm; **ESC** to cancel.

Power On / Auto Power

Press **⏻** to turn the fishfinder on.

If the fishfinder is wired for auto power, it turns on automatically whenever the boat's ignition is turned on. This ensures that the engine hours counter and optional fuel functions are activated. *A title display appears briefly. This is followed automatically by the Installation menu the first time the fishfinder is switched on. Use this menu to specify the language (see section 3-1 Setup > System) and units (see section 3-6 Setup > Units).*

At all other times, the title display is followed by the display that was used most recently.

If the transducer is not connected, the message: *Enter simulate mode?* will appear. Press **<** or **>** to switch between *Yes*, *No* or *Never*. (If the transducer was not intentionally disconnected, turn off the fishfinder and refer to the section on Troubleshooting in Appendix B.) Press **ENT** to confirm the selection and the startup sequence will continue.
